

SWG on Evaluation and Diagnostics

IAMC Annual Meeting
Tsukuba, JAPAN

03 December 2019

The E&D SWG Charter

The SWG on Evaluation and Diagnostics exists to foster activities

that help describe, document and understand the performance of integrated assessment models

so as to improve model performance and reliability and

to make recommendations in the areas of priorities for community activities and standards of best practice.

This Year We Surveyed the IAMC regarding: **Documentation and Validation**

- We asked IAMC modeling teams to report on their teams' approaches to model validation.
- We asked for one to two PowerPoint slides summarizing each team's approach to model documentation and validation.

We Received 13 Responses

Model name	Host institution
AIM	NIES/Kyoto Univ.
BLUE, TEA	COPPE
GCAM	PNNL/Univ. Maryland
GRACE	CICERO
IGSM	MIT
IIM	IIM
IMACLIM	CIREN
IMAGE	PBL
MERGE-ETL	EPRI
MESSAGE	IIASA
PECE_LIU	Renmin Univ.
REMIND	PIK
WITCH	CMCC
Total (13)	

Almost all models had some form of documentation

Model name	Host institution	Documentation	
		Wiki	Full doc
AIM	NIES/Kyoto Univ.	X	X

Integrated assessment modeling

Integrated assessment models (IAM) aim to provide policy-relevant insights into global environmental change and sustainable development issues by providing a quantitative description of key processes in the human and earth systems and their interactions. The modelling is integrated, i.e. it uses information from many scientific disciplines and describes both the human and earth system. The term assessment refers to focus on generating useful information for decision-making, even in case of large uncertainties. IAMs, for instance, have been successfully applied in support of climate policy (insights in future greenhouse gas emissions and options for mitigation), in several environmental assessments (e.g. the Millennium Ecosystem Assessment), but IAMs have also published a large amount of scientific papers.

Documentation

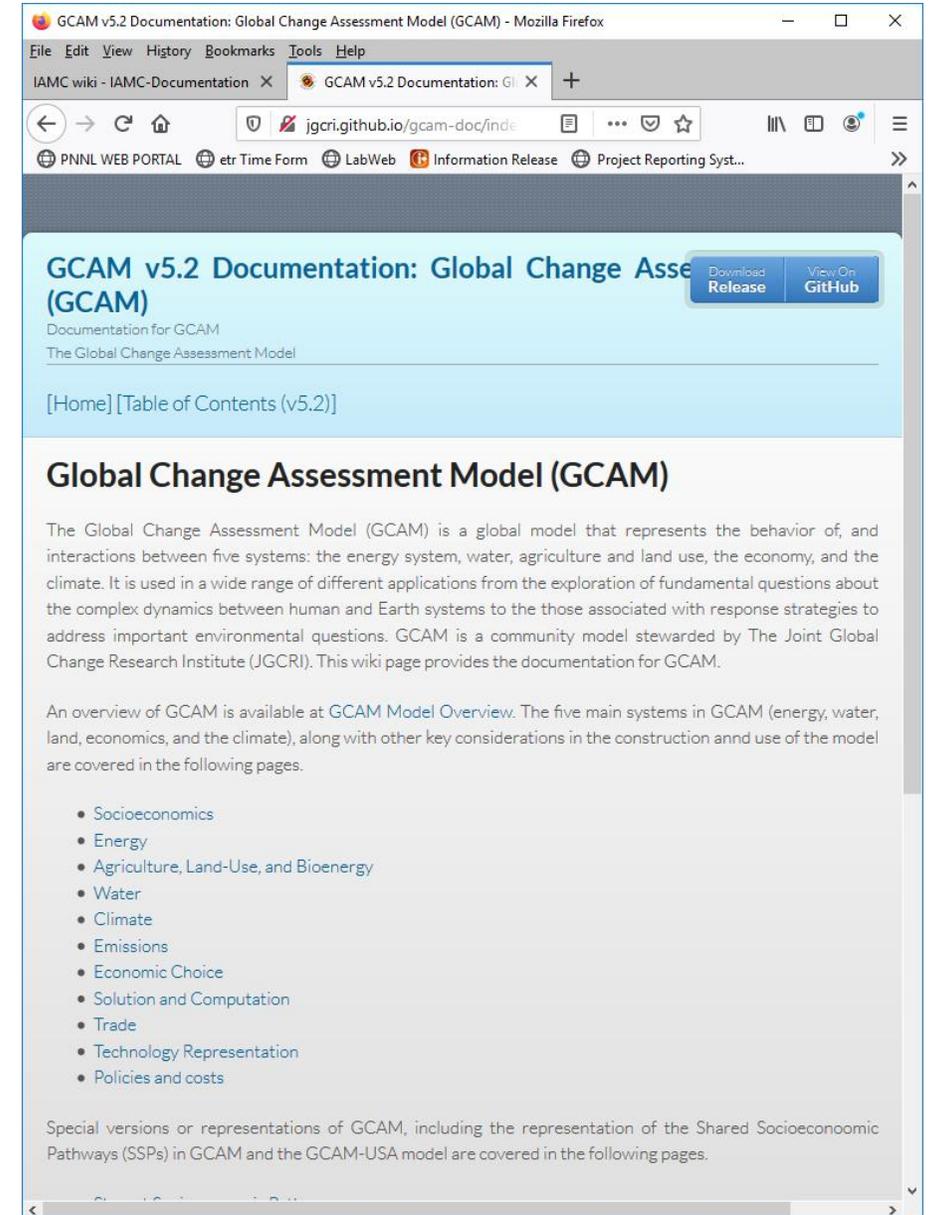

For the purpose of IAMs, a transparent model documentation is essential. IAM teams have documented their models individually, often using web-supported tools. As IAMs, however, are often used together it is also important to have information on the similarities and differences across IAM models. This database provides an overview of the IAM

Many models have their own publicly available documentation

GCAM has both a peer-reviewed documentation and its own internal documentation.

Calvin K.V., P.L. Patel, L.E. Clarke, G.R. Asrar, B. Bond-Lamberty, A. Di Vittorio, and **J.A. Edmonds**, et al. 2019. "GCAM v5.1: Representing the linkages between energy, water, land, climate, and economic systems." *Geoscientific Model Development*. PNNL-SA-137098

How to keep everything up to date simultaneously?

The Asia Integrated Model (AIM)

An example of a model report to the E&D SWG

AIM Model Validation: Documentation & Availability

Model Name: Asia-Pacific Integrated Model (AIM)

Model type: Integrated Assessment Model (coupled economy, energy, land, climate system)

Model documentation: Full formulas can be found in the following free document or a book chapter.

https://www.researchgate.net/publication/303382176_AIMCGE_basic_manual

https://link.springer.com/chapter/10.1007/978-981-10-3869-3_13

Model availability: Upon request. We basically do training workshops for the users.

Model data availability: Same as above.

Community listserv: No

AIM Model Validation: Techniques

- **Hindcasting/cross-validation**
 - Energy model : Fujimori, et al. (2016)
- **Model intercomparisons:** Participation in EMF (for the current version since EMF30) as well as other model intercomparisons, e.g. CD-LINKS, AME, ADVANCE, LIMITS, AR5 and 1.5SR database.
- **Forecast trend comparison to history/“stylized facts”**

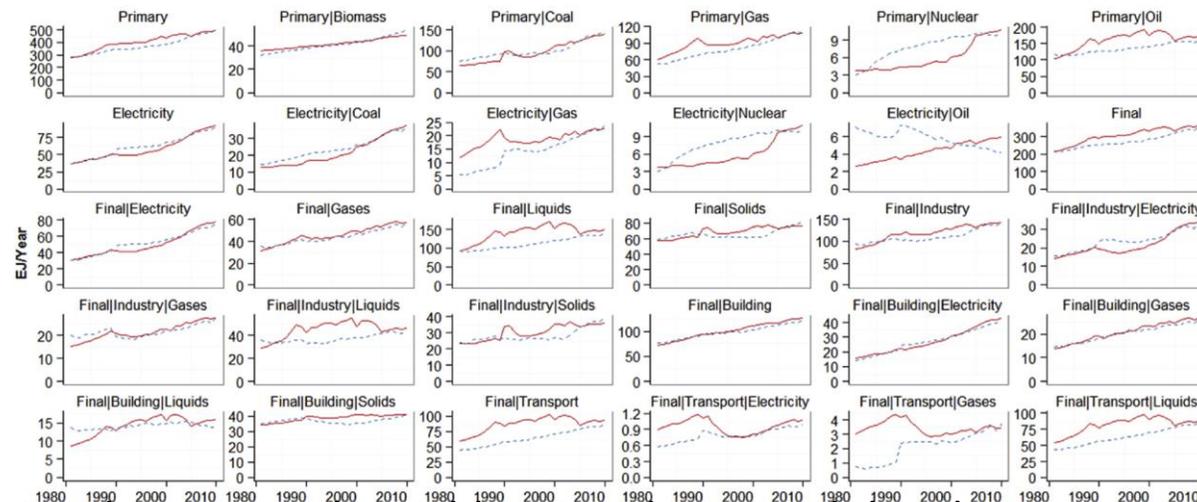

Fig. 1. World regional aggregated variables. Simulation and the observation are shown. The definition of the figure title is shown in Supporting Information in Fujimori et al. (2016).

Challenge of keeping multiple models documented and validated

- AIM CGE
- AIM ENDUSE
- AIM/SLCP tool
- AIM-SSP/RCP Gridded Emissions and Land-use data
- AIM/Trend Model
- AIM/Energy Snapshot Tool
- AIM/Energy Snapshot Tool
- AIM/climate
- AIM/impact

ReMIND/MAgPIE

An example of a model report to the E&D SWG

REMIND: Availability and Documentation

Model name: Regionalized Model of Investments and Development (REMIND)

Model type: Integrated Assessment Model (coupled economy, energy, climate system)

Model documentation: <https://www.pik-potsdam.de/research/transformation-pathways/models/remind>;

https://www.iamcdocumentation.eu/index.php/Model_Documentation_-_REMIND

Model availability: Transparent source code - for the sole purpose of reading:

<https://www.pik-potsdam.de/research/transformation-pathways/models/remind/remind-source-code-registration>;

MAGPIE: Availability and Documentation

Model name: Model of **A**gricultural **P**roduction and its **I**mpact on the **E**nvironment (MAGPIE)

Model type: Integrated Assessment Model (land-use-system)

Model documentation: <https://doi.org/10.5281/zenodo.1471526>;
Peer reviewed publication: Dietrich JP, et al. (2019) *MAGPIE 4 - a modular open-source framework for modeling global land systems*. In: Geoscientific Model Development, 12 , 4. 1299-1317 p.

Model availability: Open Source at GitHub:
<https://github.com/magpiemodel/magpie>

REMIND-MAgPIE: Validation of coupled system

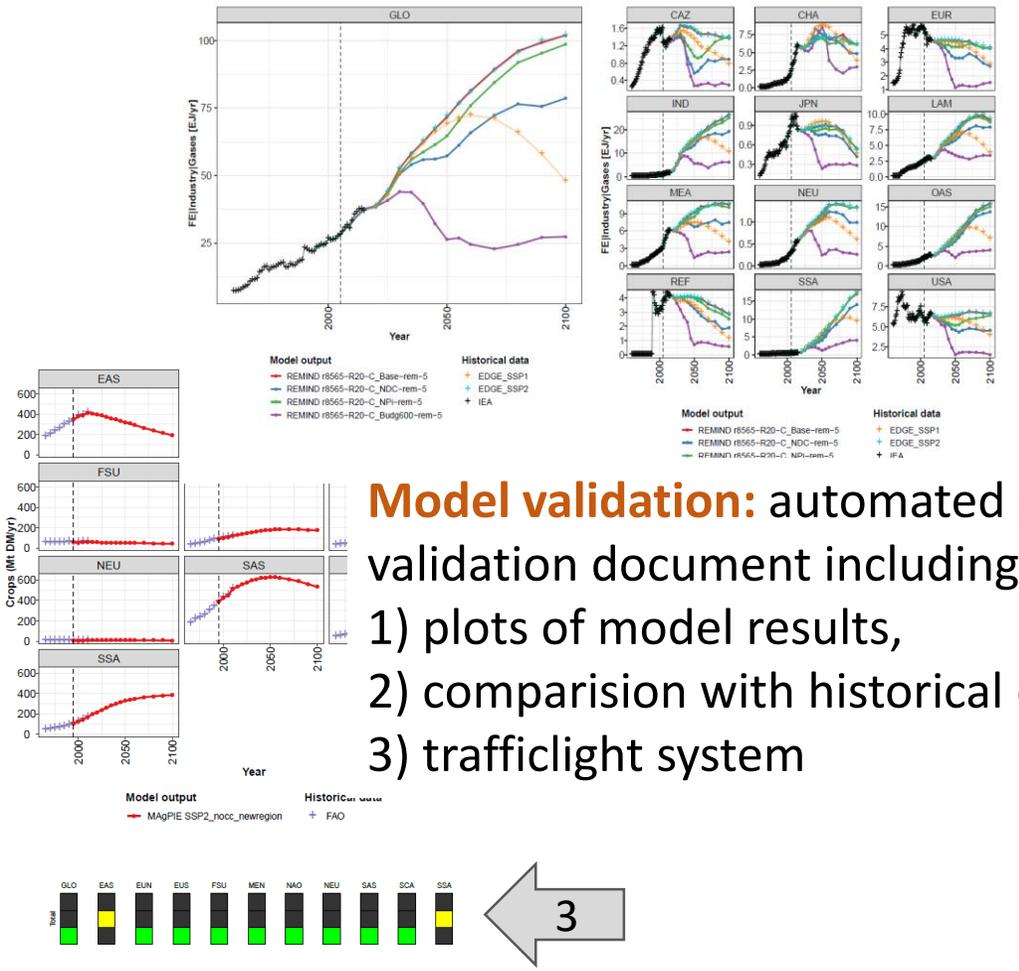

Model intercomparisons: Participation in model intercomparisons, e.g. CD-LINKS, AR5 database, ADVANCE (VRE integration, 1.5-2°C mitigation), EMF-27, EMF30, EMF33, [LIMITS / AMPERE / RoSE]

Model parts: sensitivity analysis for different parts of the model:

- **Economics:** Luderer, G. et al. “Economic Mitigation Challenges: How Further Delay Closes the Door for Achieving Climate Targets.” *Environmental Research Letters* 8, no. 3 (September 1, 2013)
- **Fossil sector:** Bauer, N. et al. “Global Fossil Energy Markets and Climate Change Mitigation – an Analysis with REMIND.” *Climatic Change* 136, no. 1 (May 2016)
- **Renewables:** Ueckerdt, F. et al. “Decarbonizing Global Power Supply under Region-Specific Consideration of Challenges and Options of Integrating Variable Renewables in the REMIND Model.” *Energy Economics* 64, no. Supplement C (May 1, 2017)

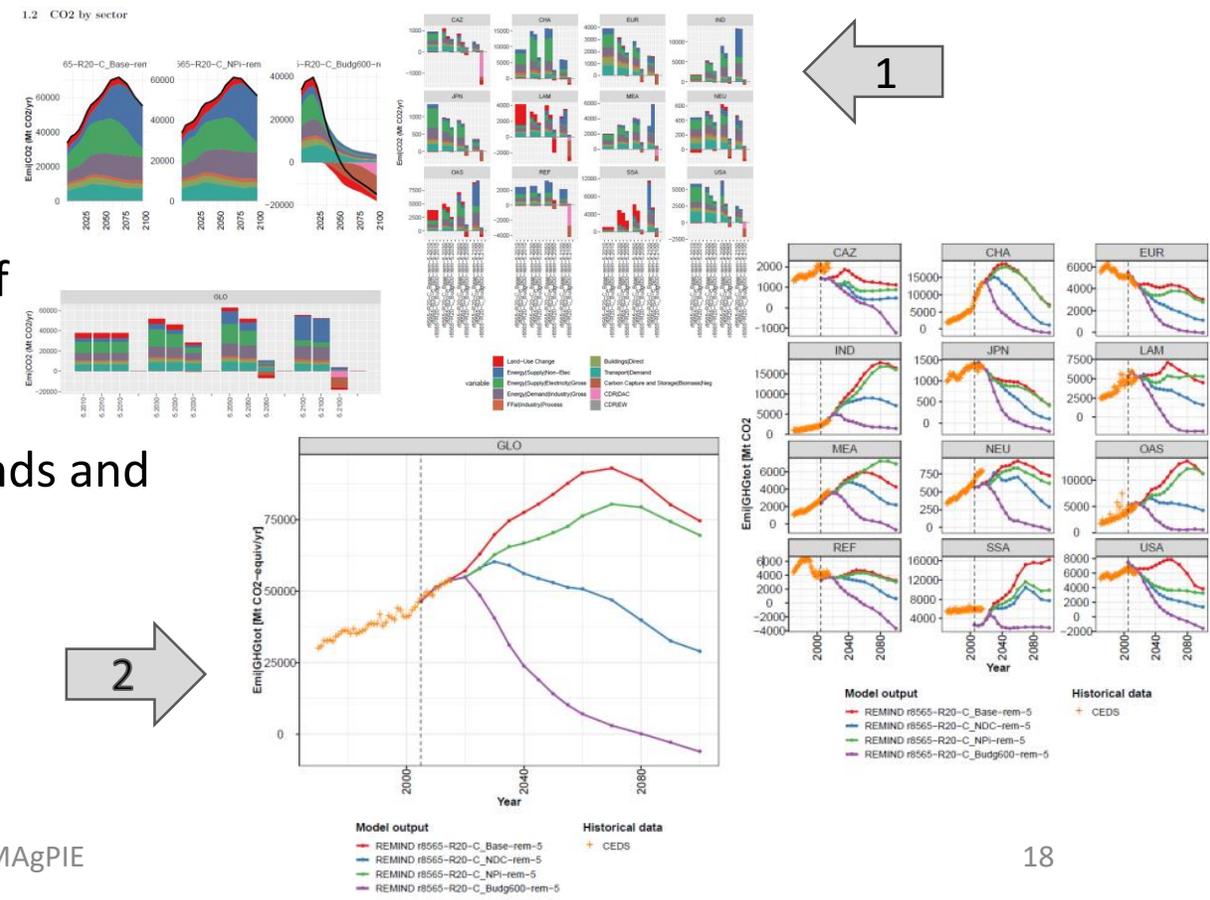

REMIND-MAgPIE: Validation of coupled system

Model calibration: calibrate REMIND to match GDP and final energy trajectories

Model validation: automated generation of validation document including

- 1) plots of model results,
- 2) comparison with historical data and trends and
- 3) trafficligh system

Where do we go from here?

- Do we want to create a web link to model documentation?
- Do we want to develop good practice guidelines?
- Do we want to consult with our Advisory Council on how other disciplines handle these issues?
- Model documentation journal.
